

Cross-Organization Coupling of Climate Models through ESMF (A Prototype Over High-Speed Networks)

**Shujia Zhou (Lead), C. Cruz, R. Burns, B. Womack, G. Higgins
NASA SIVO/Northrop Grumman TASC**

Collaborators:

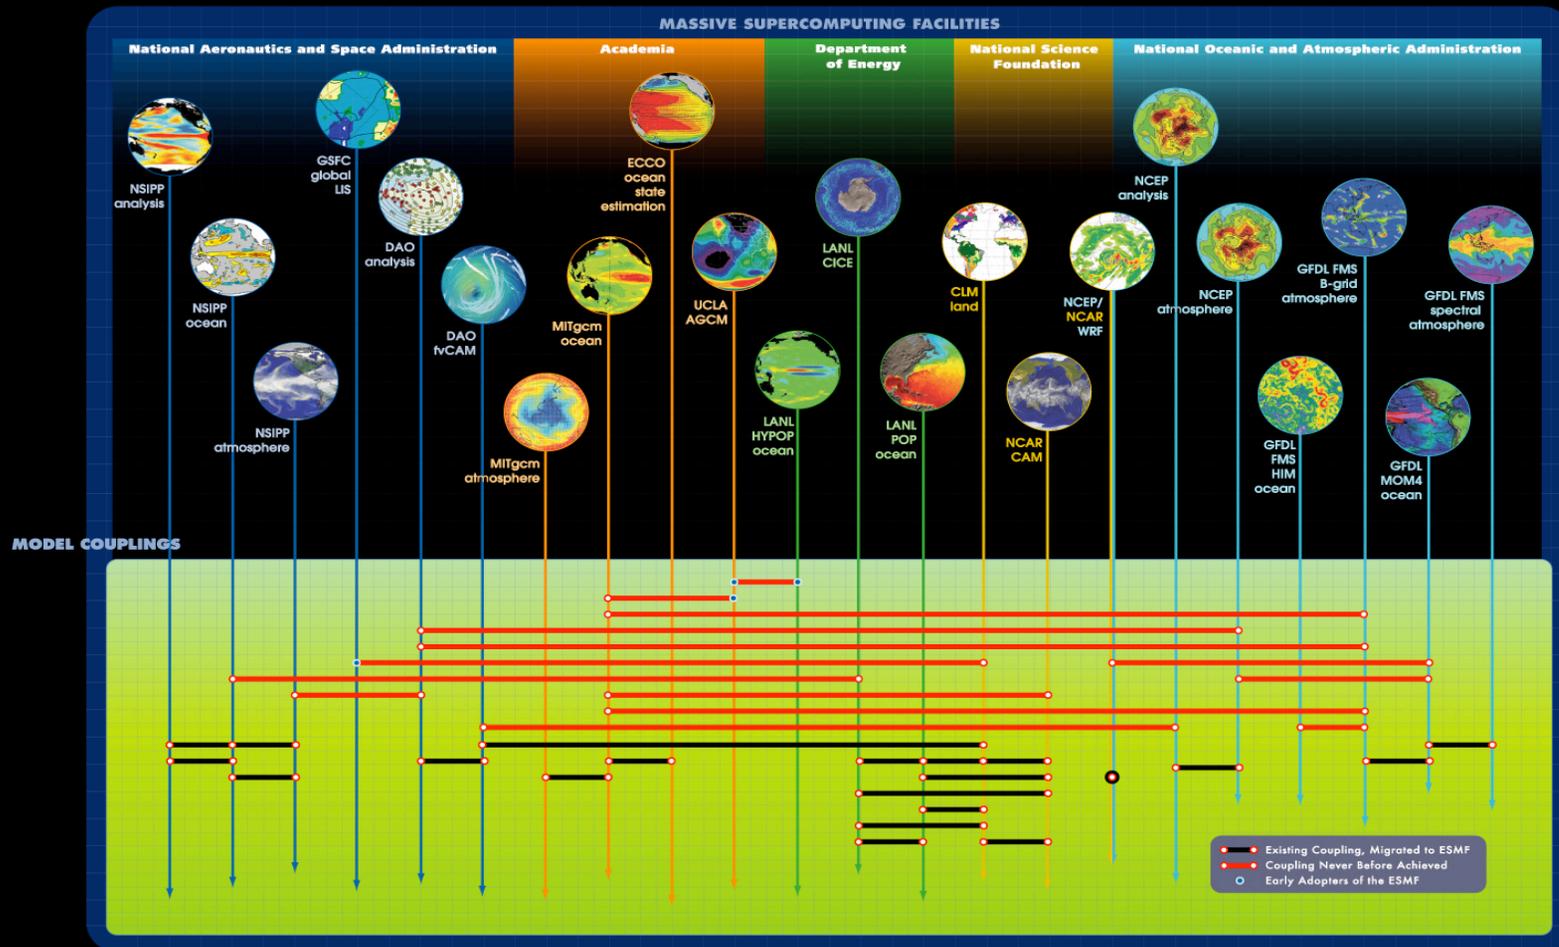

- High-speed network: P. Gary, B. Fink, P. Lang (NASA GSFC/ADNET)
- Cluster system admin: K. Fisher (NASA GSFC)
- XCAT/Proteus: M. Govindaraju, K. Chiu, M. Head (SUNY, Binghamton)
- Models: J. Spahr, C. Mechoso (UCLA), C. Hill (MIT), P. Jones (LANL)

Presented at NASA Exhibit (booth 1810) at SCI05, November 14-18, 2005

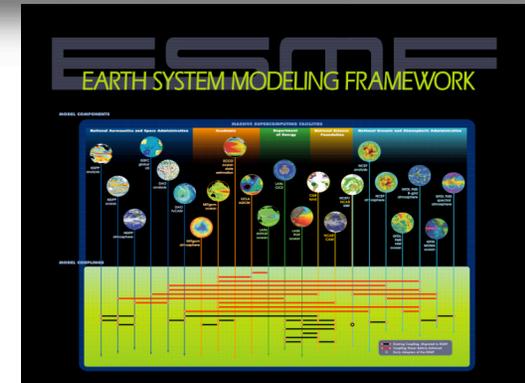

ESMF

EARTH SYSTEM MODELING FRAMEWORK

MODEL COMPONENTS

ESMF Enables Model Coupling

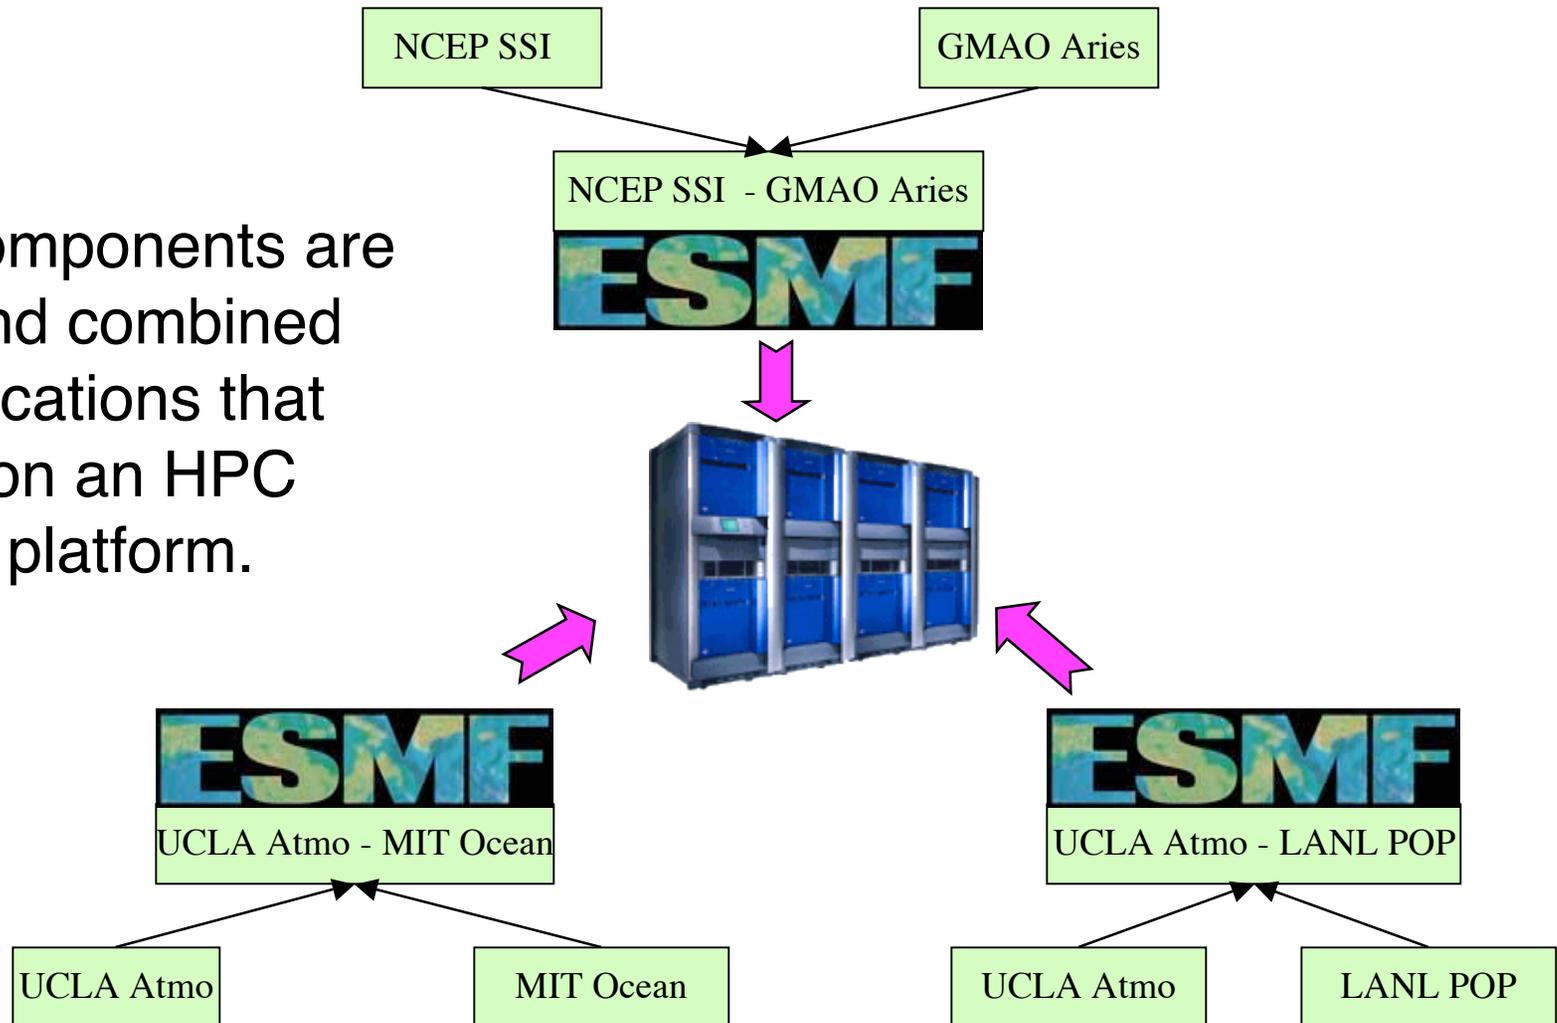

- ESMF defines:
 - » An architecture for composing multi-component applications
 - » Data structures and utilities for developing model components.
- Aims to create a framework usable by individual researchers as well as major operational and research centers

ESMF Enables Model Coupling

Applications Leave Their Institutions to Interact

ESMF components are ported and combined into applications that execute on an HPC compute platform.

- ESMF is being used by researchers at:
 - » National agencies like NASA, DOD, NSF/NCAR, and NOAA
 - » Universities like MIT and UCLA
- ESMF provides a common standard that:
 - » Simplifies creation of new scientific coupling experiments
 - » Enhances opportunities for scientific collaboration

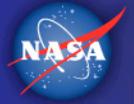

Examples of new ESMF interoperability experiments

NCEP SSI - GMAO Aries

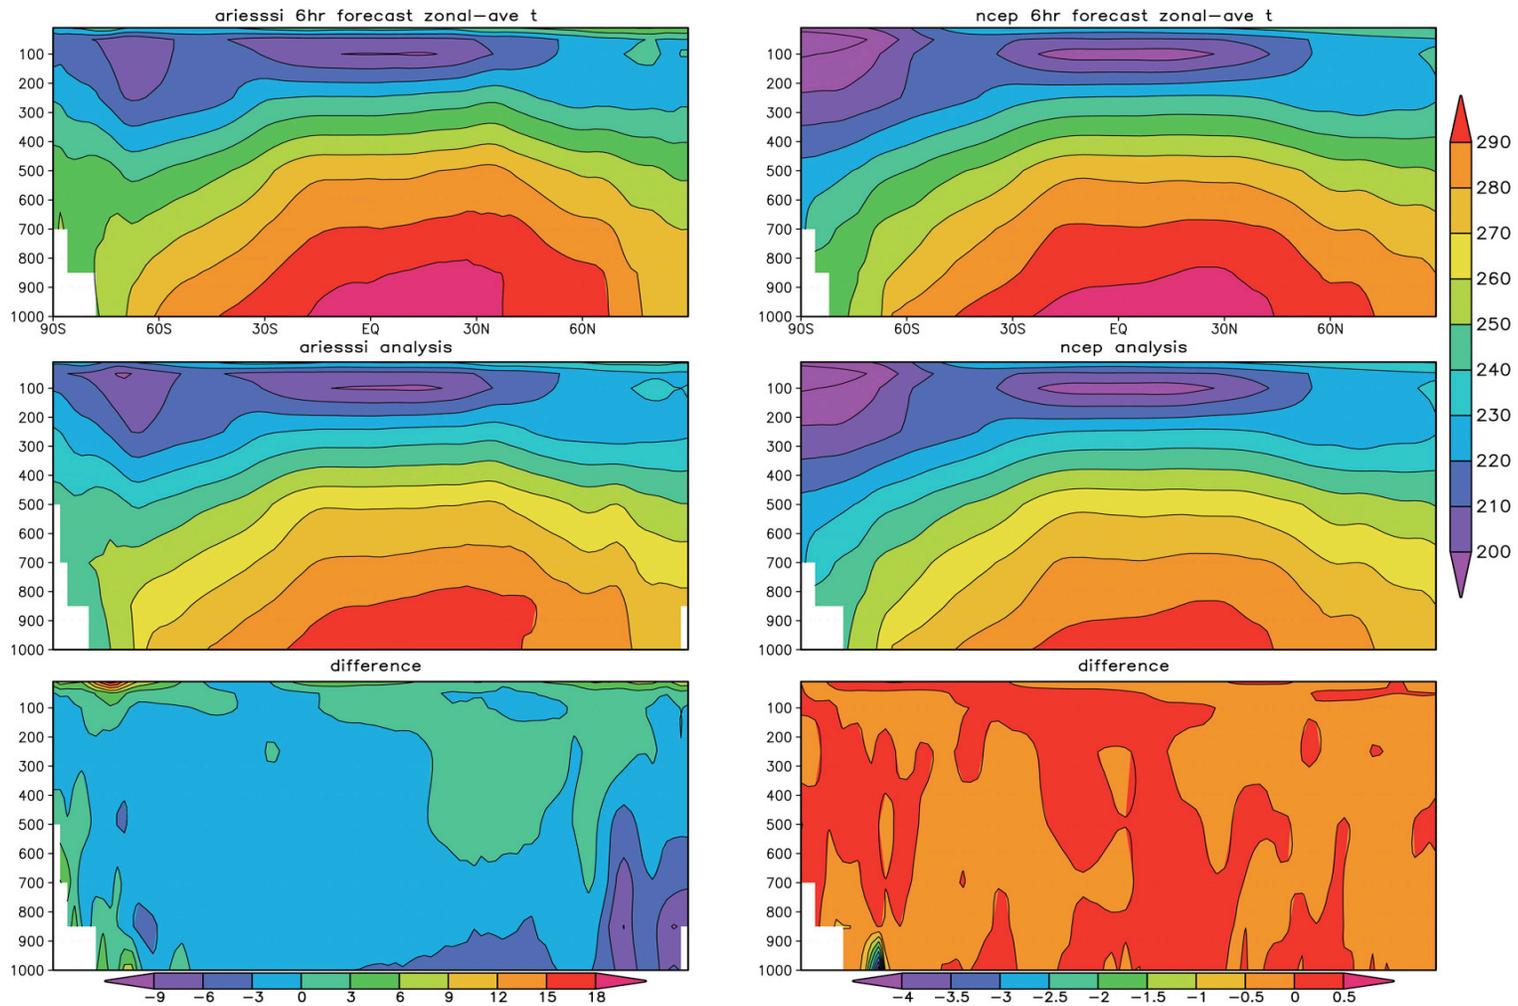

UCLA Atmo - LANL POP

UCLA Atmo - MIT Ocean

ESMF Enables New Science

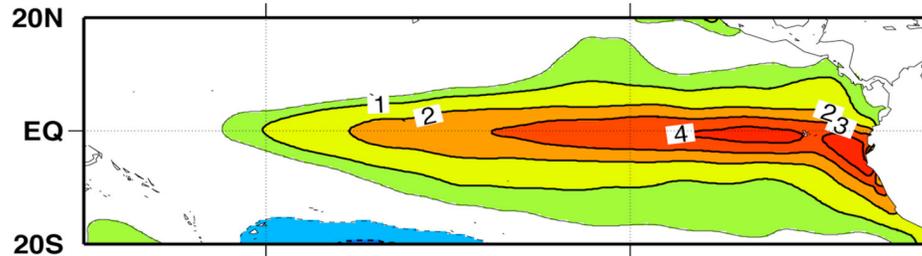

NCEP SSI - GMAO Aries

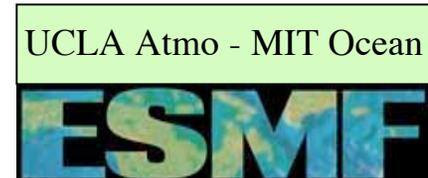

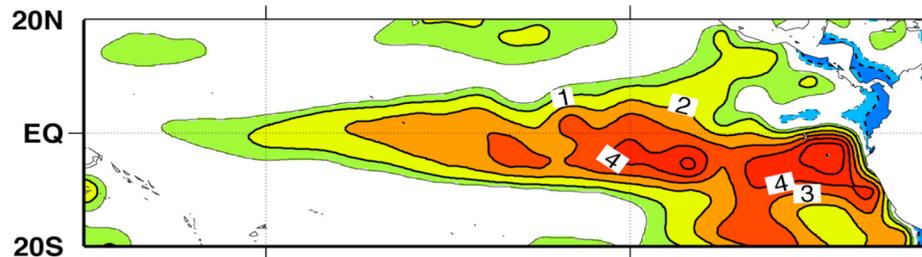

ESMF Enables New Science

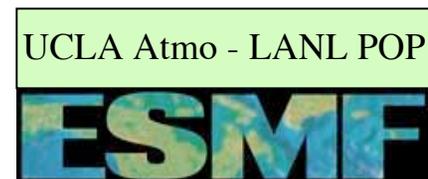

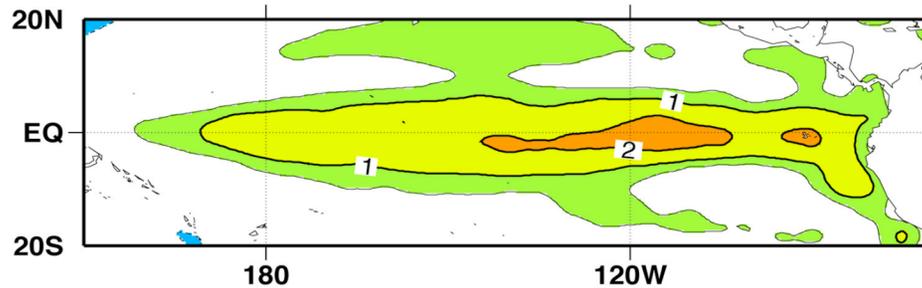

Dec 1997-Feb 1998, SST anomaly, Reynolds Analysis

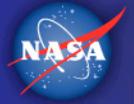

Dec 1997-Feb 1998, SST anomaly, forecast with MIT

Dec 1997-Feb 1998, SST anomaly, forecast with LANL POP

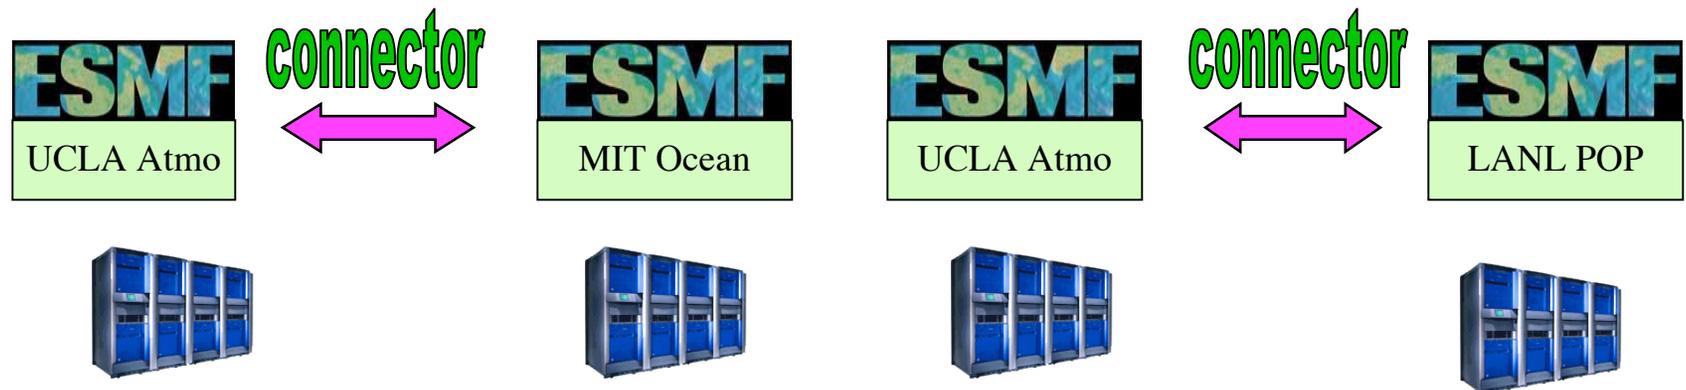

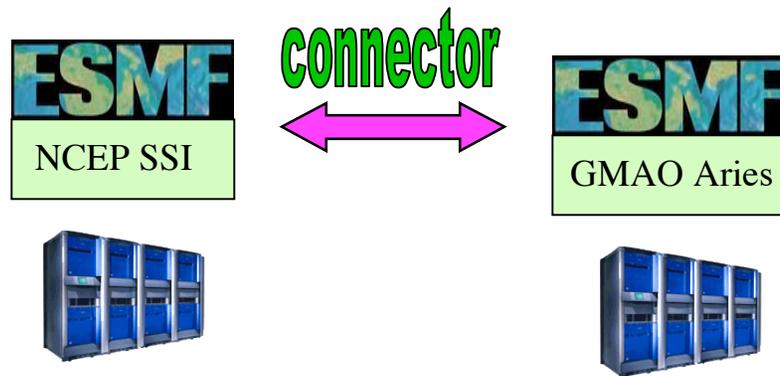

- The National LambdaRail and other optical networks are linking geographically distributed data and computing research centers.

Optical Networks Enable Distributed Experiments

Applications Stay at Their Institutions to Interact

ESMF components could be connected via high-speed optical links to ESMF components on other HPC platforms.

connector will be based on distributed components using fast protocols

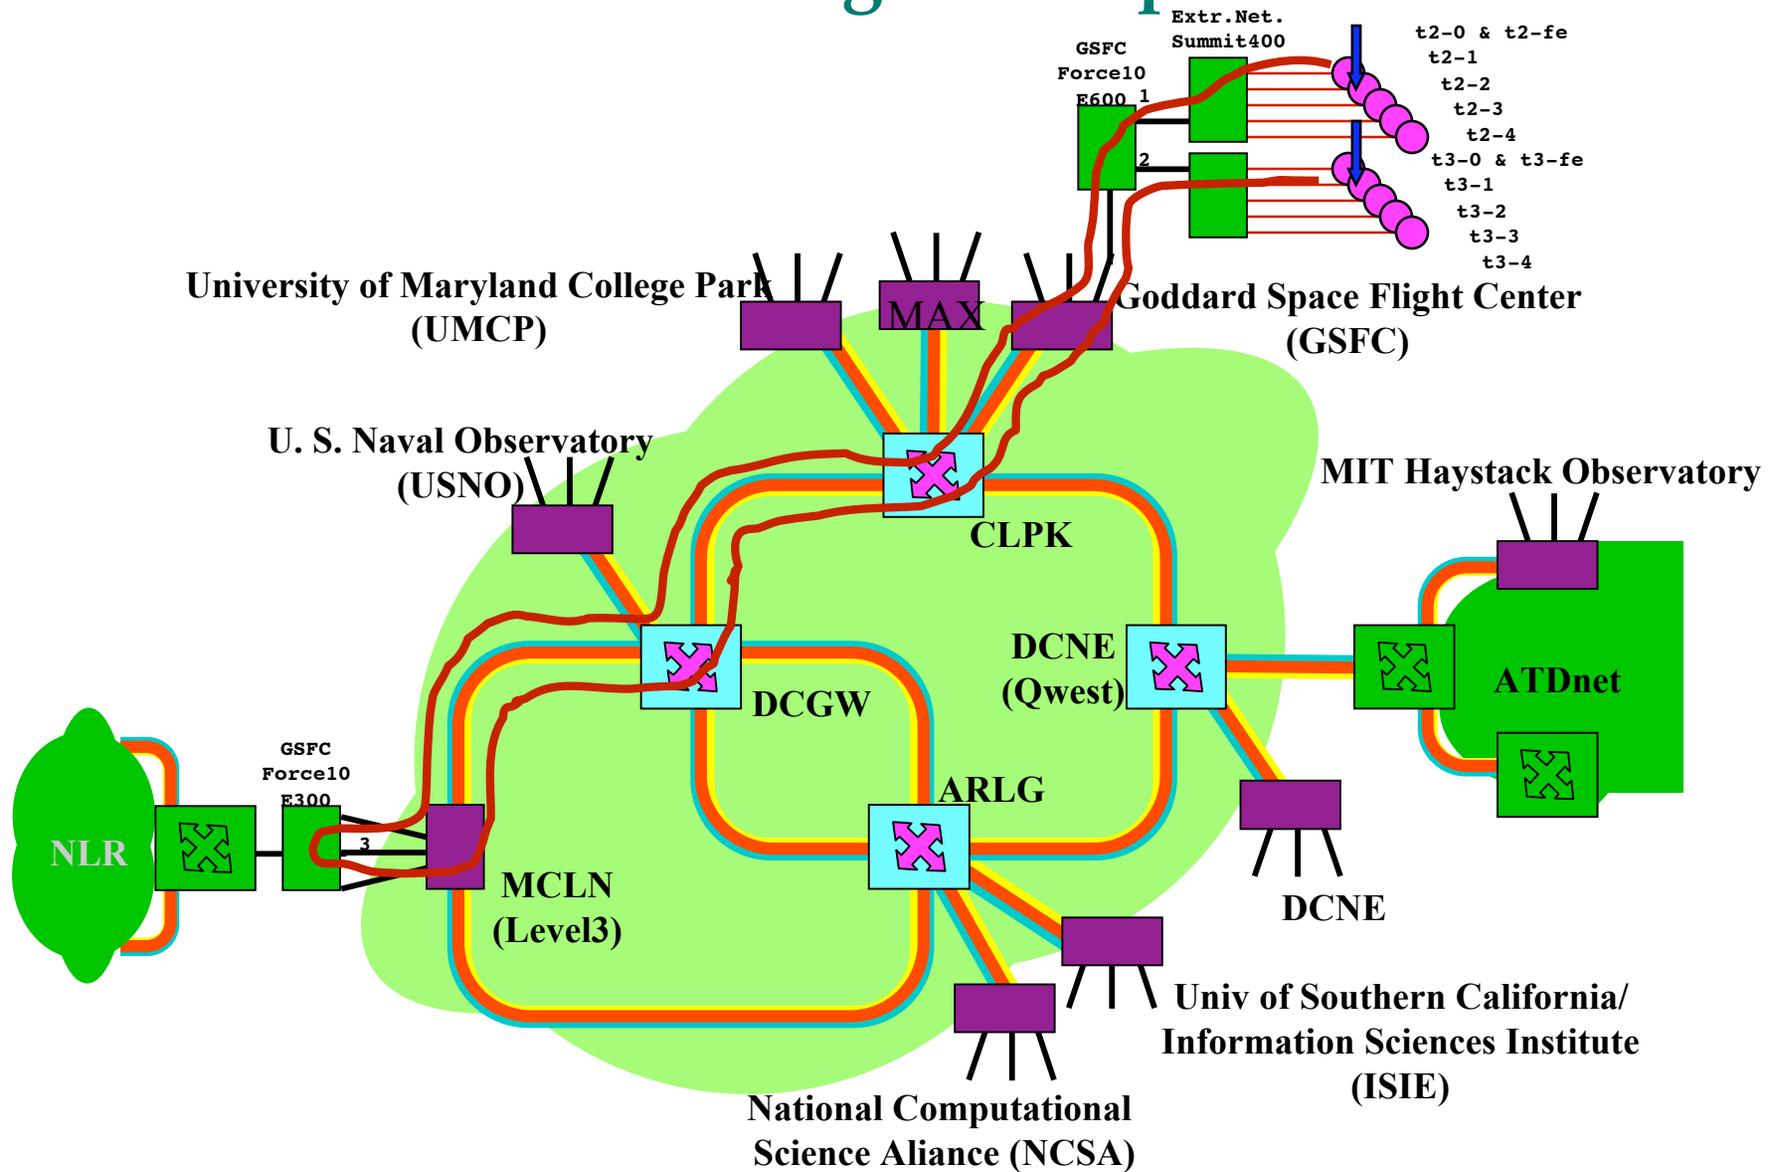

Northrop Grumman TASC High-Performance Network Research

- Develop a framework for managing distributed data, applications, and users over a limited number of shared networks and computational resources
 - » Transport of large data volumes over networks
 - » Computationally intensive applications
 - » Near real-time access to data products

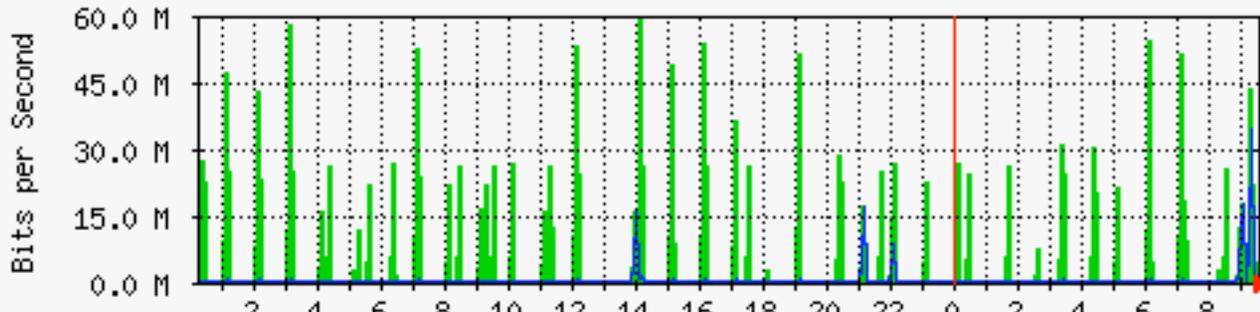

A Prototype Over High-Speed Networks

- A high-speed network linking to National LambdaRail
- Multiple Linux clusters
- A connector software based on CCA-compliant and Grid-ready XCAT-C++/Proteus
 - » Augment with fast communication protocols such as UDT
 - » Support various data types, including 2D arrays
